B-FORMANCE
mesosonic

The dual action of **ultrasounds** combined with **mesoporation**

Studies and a continuous research into new, high-performance and cutting-edge technologies in the cosmetic and medical fields have led MANTIS engineers to combine the recognised benefits of **ultrasounds** with the **conveying power of mesoporation** (non-invasive mesotherapy without the use of needles), developing a device unique in its kind, which features a combined dual action: **ultrasounds + mesoporation** for an excellent B•FORMANCE.

100%
MADE IN ITALY

The handpieces combine mesoporation and ultrasounds, reducing treatment times and improving the efficacy of both actions.

Handpieces

The face and body handpieces make it possible to treat different areas and convey the active ingredients contained in the products used during the treatment.

However, the real innovation of B•FORMANCE consist in the ability of both handpieces to convey both serums and creams.

The face handpiece, with a 28 mm diameter, makes it possible to work even in the smallest zones, thus treating blemishes around the eyes and lips. Its ergonomic design makes it easy to handle and use.

The body handpiece, with a 60 mm diameter, is larger than the face handpiece and allows the accurate and fast treatment of larger areas.

The unique rounded shape ensures sliding movements, while the effective grip makes the handpiece particularly easy to handle.

Mesoporation

A new, non-invasive parenteral method allowing the active ingredients of serums and creams to be absorbed in depth. Thanks to a series of mild electric pulses, the "channels" (electropores) of the tissue structures are opened, activating the interstitial and intracellular fluid flows that allow the active ingredients of the products used during the treatment to rapidly penetrate the skin, thus obtaining the desired results.

Ultrasounds

High frequency waves that transfer energy, which is converted into heat containing renowned therapeutic properties. This technology consists of a mechanical stress which caused the movement of the tissue molecules, inducing pressure variations that move the liquid inside the biological tissues and realign the collagen fibres. Ultrasounds are used in a broad range of fields, among which therapeutic and cosmetic.

Where does B•FORMANCE acts

The ultrasounds, enhanced by the efficient conveying power of mesoporation, give life to an innovative device for the aesthetic medicine and professional aesthetic sectors: B•FORMANCE. The action of the active ingredients conveyed during the treatment is enhanced, thus guaranteeing immediate results.

FACE

B•FORMANCE for the face is ideal to treat thin and dehydrated skin and to reduce the signs of ageing and photoageing, such as wrinkles and spots. Excellent results have also been obtained in the treatment of atonic skin, which causes an “emptying” and sagging effect on the shape of the face.

TREATMENTS:

- Anti-ageing
- Toning and filling
- Total face

BODY

B•FORMANCE for the body reduces the “orange peel” skin effect and improves blemishes such as sagging and skin laxity. From the very first treatment it visibly reduces the adipose panniculus, tones and firms the skin, alleviates recent stretch marks and stimulates the draining action.

TREATMENTS:

- Body shaping for hips, abdomen and buttocks
- Toning for arms, legs and buttocks
- Total body

wrinkles

dark circles

eye bags

cutaneous dyschromia

atony

reduction of
circumferences

localised adiposities

remodelling
and toning

cellulite
blemishes

lymphatic drainage

stretch marks

buttock firming

Remote technical assistance

For all its devices, Mantis guarantees remote technical support through an internet connection, for a continuous and efficient assistance.

Our **results** are your **success** stories!

B•FORMANCE face and body treatments have demonstrated amazing and constant results over time from the very first sessions.

The body's silhouette proves defined, as if it were sculpted and remodelled, and the tissues are toned and re-oxygenated.

On the face, volumes appear more compact and repositioned, wrinkles are more subdued and skin texture is visibly improved, re-oxygenated and toned.

**Extraordinary and visible performance from
the first treatment using a single device.**

Just 25 minutes

is all it takes to rediscover your natural beauty.

TECHNICAL FEATURES

	Size	Material	Working Length
Face Handpiece	Diam. 28mm	AISI 304	300mm
Body Handpiece	Diam. 60mm	AISI 304	300mm
Conductive plate	200x150mm	AISI 304	300mm

Ambient conditions of	Use		
	Temperature	°C	10-35
	Relative humidity	%UR	10-70
	Atm. pressure	hPa	800-1060
Transport and/or storage	Use		
	Temperature	°C	-20-55
	Relative humidity	%UR	10-98
	Atm. pressure	hPa	800-1060

Operator guide (Display)

10" LCD resistive touchscreen

Electrical hazard protection class

I

Applied part type

BF

Power supply

110 -240 VAC 50/60 Hz

Maximum input power

200 VA

Fuse

1x2A 250V

Maximum generator voltage

From 0V a 50V

Variable carrier frequency

From 500Hz a 2KHz

Peak frequency

0.6 Hz

Maximum output current

From 0.5mA to 5mA with protection and integrated control

Maximum stimulation current

1.5 mmA/cm²

Maximum generator voltage

From 0V a 50V

Modulated frequency

1 Mhz

Maximum power density

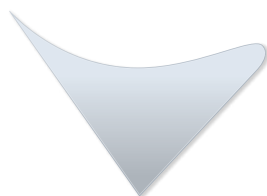

1,5 W/cm²

Measurements

55 x 40 x 46 cm

Net weight

14 Kg
